

Installing VirtualBox

1. Go to <https://www.virtualbox.org/wiki/Downloads> and Choose your version of virtual box
2. Go to <http://www.ubuntu.com/download/desktop> and choose your version of Ubuntu and download the .iso file.

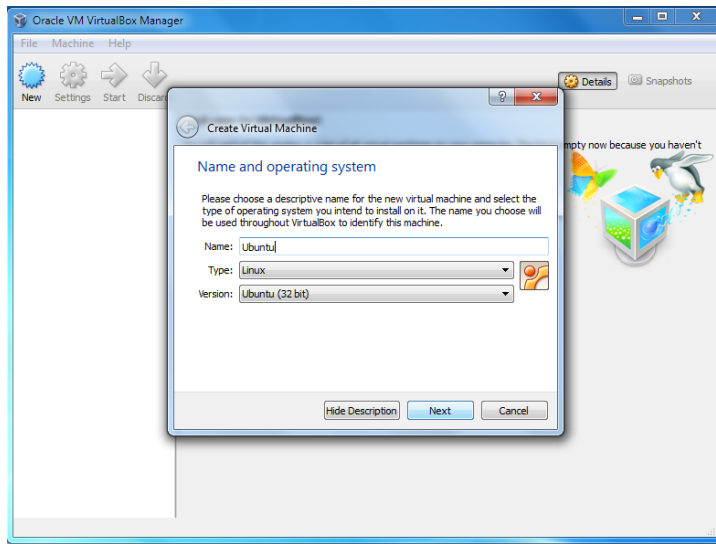

3. Install VirtualBox

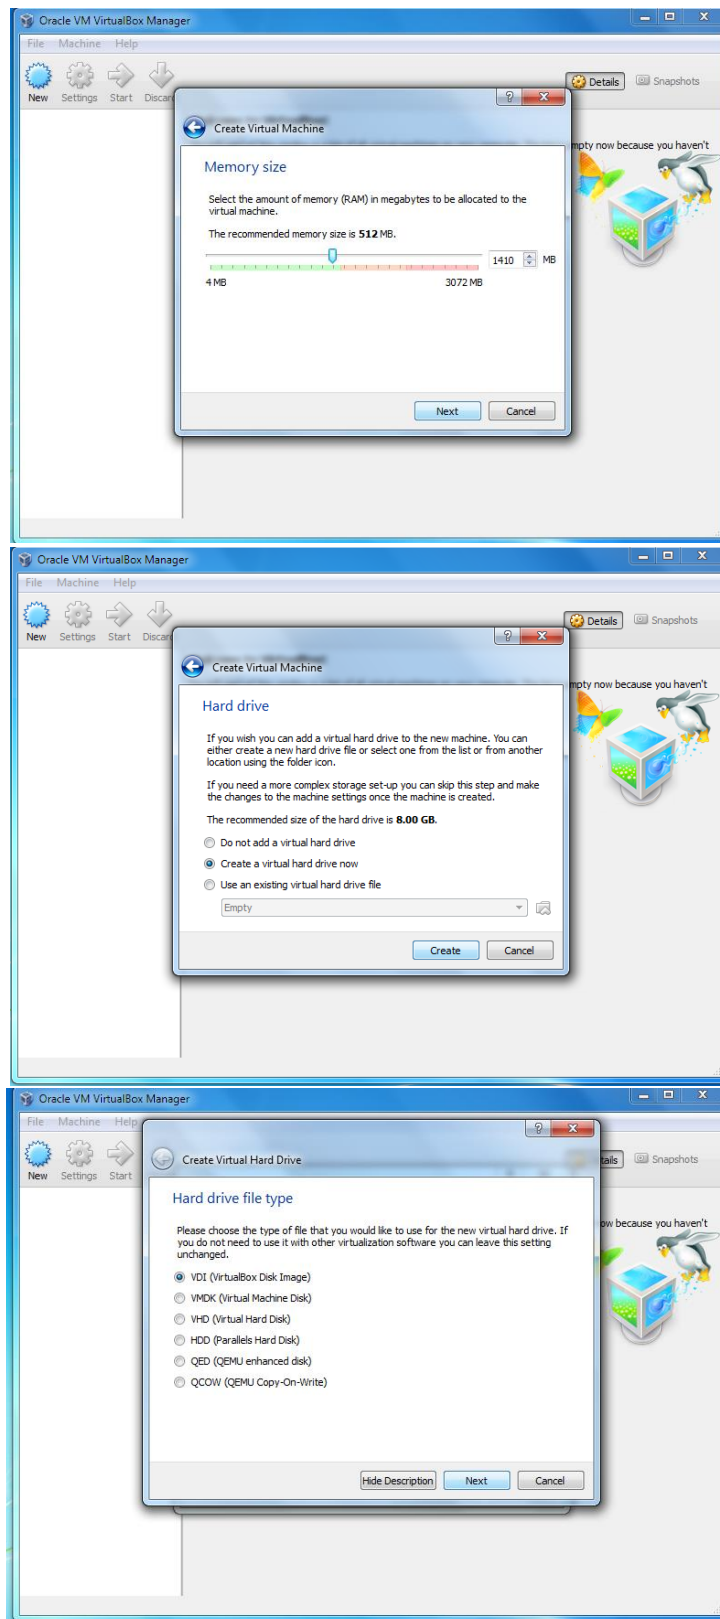

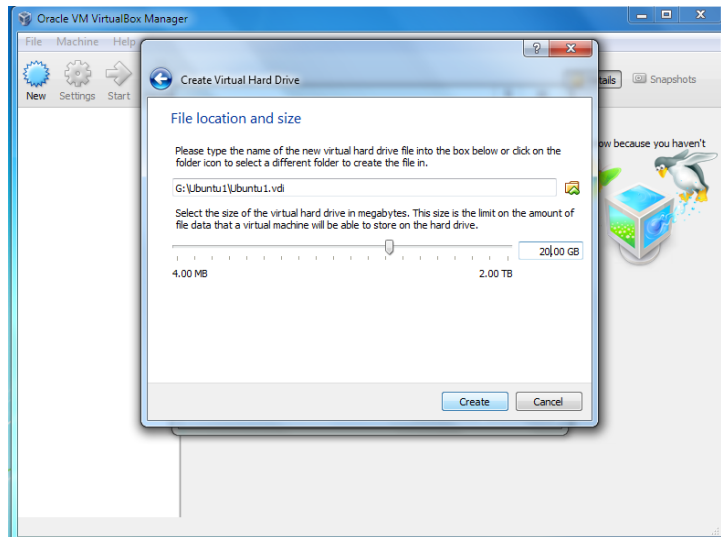

4. Click on new and give the path to your Ubuntu .iso file

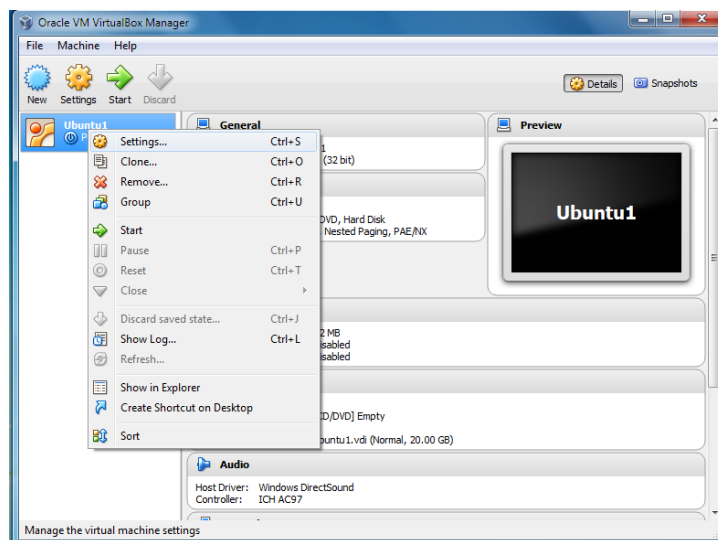

5. Set RAM size for VirtualBox

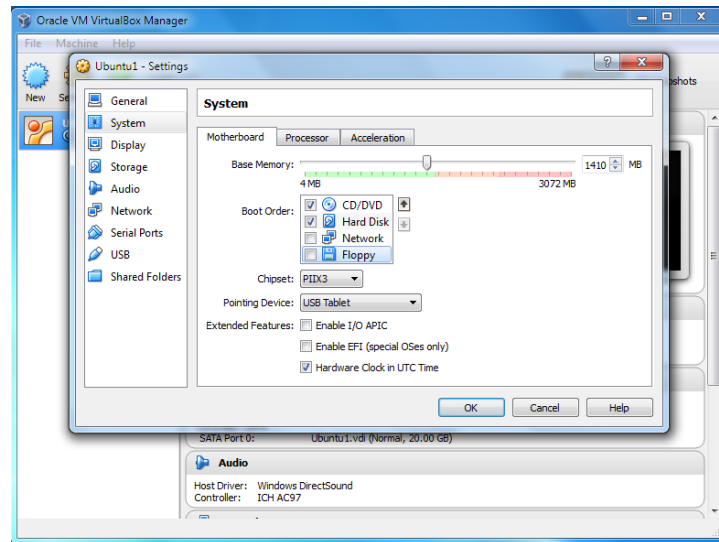

6. Set storage size for the virtual machine

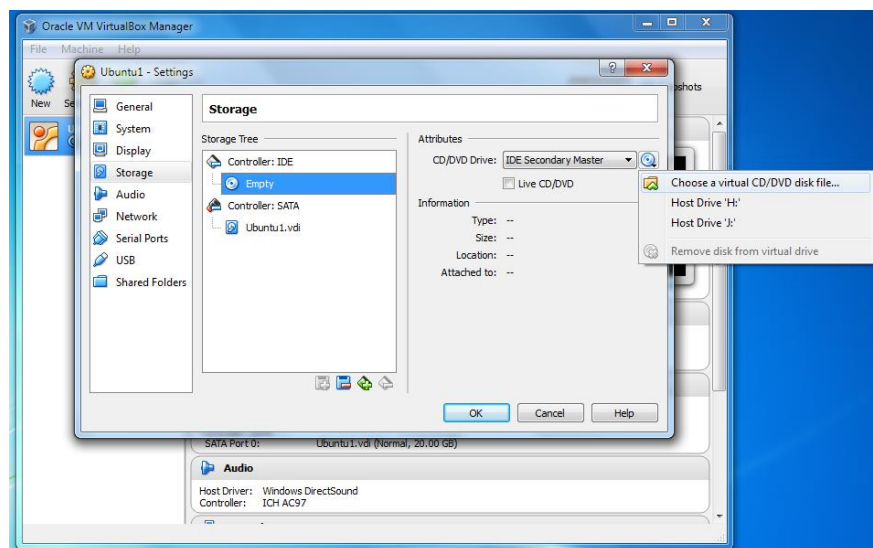

7. Go to settings

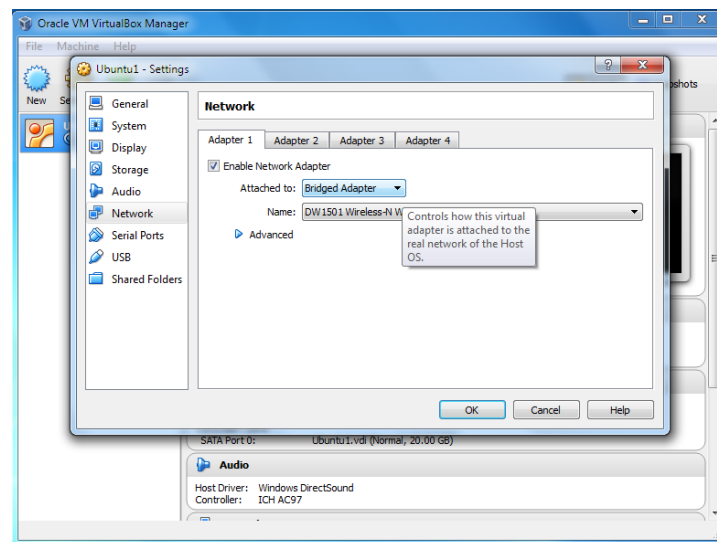

8. Set the Boot order accordingly

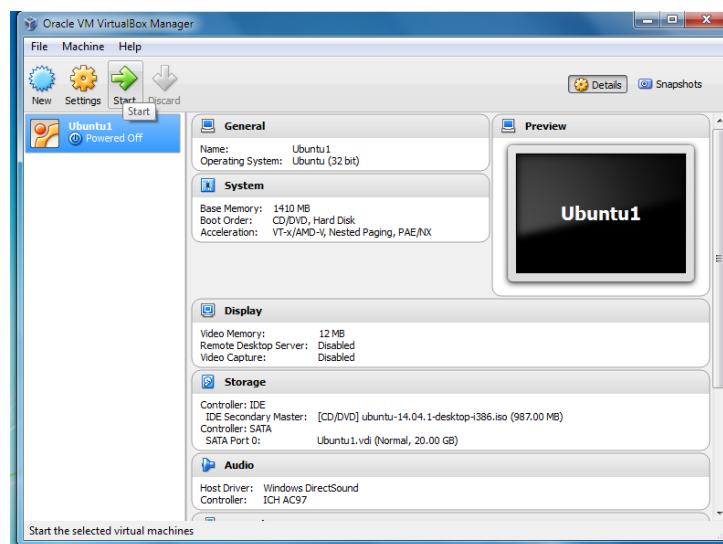

9. Choose your Ubuntu .iso file

10. Choose “Bridged Adapter” from network

11. Start the selected virtual machine

12. After the VM starts it will ask to install Ubuntu. Click on “Install” and set up the system. Setting up Ubuntu in VM is straight forward.
